No. 900 "SIT-O-SLEEP" The Davenport with a Bed
(Patented.)

Showing the Frame Closed—with Spring Seat Construction

THE FRAME ~

is exactly the same as any stationary davenport frame, except that we use two front rails instead of one. The front one of the two is loose from the frame proper and the back one is built stationary into the frame. To the loose front rail we fasten a series of slats upon which when extended the loose cushions are laid to make half of the bed. These slats slide through the notches provided in the stationary front rail and are guided between the springs by a $\frac{1}{4}$ -inch steel rod, eliminating any possible chance of their striking the springs when extending or closing.

Showing the Frame Open—with Spring Seat Construction

DIMENSIONS OF FRAME

73½ inches between the front stumps	51 inches depth when extended
27 inches seat depth when closed	31 inches height from floor to top of back
5¼-inch legs.	

Showing the Frame Upholstered—Closed as a Davenport

Construction of the Finished Davenport ~

In building up this "Davenport with a Bed" you begin by webbing the bottom the same as you would on any davenport. Ten rows of springs are placed and sewed to the webbing, arranged so that the movable slats will slide between the rows of springs. We recommend a No. 4 coil spring of 8 gauge wire. Edge wire is then tied or clipped all around the springs. The springs are tied in the usual manner except that the front edge wire is pulled down just enough so that when the roll is sewed on to the front edge wire the top of the roll will be even with the tops of the springs. After the seat has been sprung up and burlap sewed over the springs, a layer of cotton is laid over the burlap. This filling is so that the springs will not be felt when lying on the inside half of the bed. The seat denim is then placed over this filling and the seat should now be perfectly flat from front to back. The thickness of the cushions must be so that when they are laid on the slats the tops will be even with the flat seat. The rest of the upholstery is all done in the usual manner.

Showing the Frame Upholstered—Open as a Bed

The particular advantages of this "Davenport with a Bed" are: *Appearance*, one would not know that it is a bed davenport; *Comfort*, when used as a davenport it is exactly as comfortable to sit on as any stationary davenport; *Ease of Operation*, there is no mechanism to manipulate or get out of order; *No Mattress* to buy or store, the cushions being used for that purpose, and they are more comfortable to sleep on than a thin mattress pad laid over stiff springs.

Dimensions of Finished Davenport

70 inches between the arms	48 inches bed depth when open
24 inches seat depth when closed	34 inches height from floor to top of back
	18 inches height from floor to top of seat

This Frame will be shipped
entirely set-up only.
